DEPARTMENT OF RADIOLOGY

NAME ; MR PRAKASH TAWRI

AGE/ SEX; 59/M

REF BY; DR MANOJ LAHOTI (MD DM)

DATE; 28/10/2023

ICU

USG STUDY OF WHOLE ABDOMEN

Done in most advanced 4-d digital , color-doppler , fibroscan / elastography system (GE E9)

HEPATO-BILIARY SYSTEM

Liver is normal in size, shape and has smooth margins. It is uniformly isoechoic.
Intra hepatic portal & biliary radicles are undilated . No focal lesion seen .

Portal vein , CBD appears normal .

Gall bladder is normally distended with uniformly thin & regular walls .

Pancreas is normal in size, shape, contours and echotexture. No evidence of solid or cystic mass lesion .
Pancreatic duct is undilated .

Spleen is normal in size and shape. Its echotexture is homogeneous. No focal lesion is noted.

GENITO-URINARY SYSTEM

Bilateral Kidneys appear normal in size , echotexture . CMD Maintained . PC Systems are undilated
No evidence of calculus on either side except 2 to 3 small concretions . Simple exophytic cyst seen in lower pole of left kidney measuring 51 x 48 mm. Another 30 x 23 mm sized cyst seen in mid pole of right kidney with eccentric calcifications.

Urinary bladder is well distended. It shows uniformly thin walls and sharp mucosa.

Prostate is normal in size & echotexture .

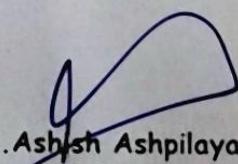

There is no evidence of enlarged coeliac, mesentric, portal pre or paraaortic lymph nodes.

The great vessels namely aorta and IVC and its visualized branches are normal

Minimal ascites . No evidence of pleural effusion on either side

IMPRESSION:

- MINIMAL ASCITIS
- BILATERAL SIMPLE RENAL CYSTS

Dr. Ashish Ashpilaya
MDRD
Consultant Radiologist

- ◆ Advised to be reviewed / repeat scan SOS, If and when required as USG findings changes alongwith the course of disease.
- ◆ Ultrasound Diagnosis is basis on appearance of grayscale shades, and it is also affected by technical pitfalls, hence it is suggested to correlate Ultrasound observations with Clinical and other investigative findings to reach the final Diagnosis.
- ◆ No Legal liability is accepted. ◆ Not for Medico legal purpose.

PATHOLOGY ANALYSIS REPORT		
E.S.R	05	0-15 mm/h

Interpretation:

- It indicates presence and intensity of an inflammatory process, never diagnostic of a specific disease. Serial changes are more significant than a single abnormal test.
- It is a prognostic test and used to monitor the courses or response of treatment of diseases like tuberculosis, bacterial endocarditis, acute rheumatic fever, rheumatoid arthritis, SLE, Hodgkin's disease, temporal arteritis, polymyalgia rheumatica.
- It also increases in pregnancy, multiple myeloma & menstruation.

PATHOLOGY ANALYSIS REPORT

HbA1C - Glycated Haemoglobin, blood by

7.4

As per American Diabetes Association (ADA)
Normal < 5.7%
Prediabetic 5.7% to 6.4%
Diabetic >= 6.5%

Estimated Average Glucose (eAG) 168 mg/dl

- HbA1c is used for monitoring diabetic control. It reflects the estimated average glucose (eAG).

- Trends in HbA1c are a better indicator of diabetic control than a solitary test.

- To estimate the eAG from the HbA1c value, the following equation is used: eAG(mg/dl)=28.7*A1c-46.7

- HbA1c Estimation can get affected due to -

1) Anemia. 2) Chronic renal failure. 3) Vitamin A. 4) Vitamin C.
5) HbA1c is falsely low in diabetics with hemolytic disease Fructosamine is recommended in these patients which indicates diabetes control over 15 days.

6) Interference of Haemoglobinopathies in HbA1c estimation.

A) HbF > 5%, an alternate platform (Boronate affinity chromatography) is recommended for testing of HbA1c.

B) Homozygous hemoglobinopathy is detected, fructosamine is recommended for monitoring diabetic status.

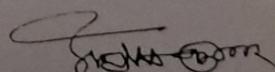

C) Heterozygous state detected (D10/turbo is corrected for HbS and HbC trait). Hemoglobin electrophoresis (HPLC method) is recommended for detecting hemoglobinopathy.

Note: HbA1c PARAMETER IS NGSP LEVEL 1 CERTIFIED

Test Done by most advanced , high tech fully automated Bio-Rad HPLC Analyzer D10 from France .
